

CONCRETE CARBIDE CORE BIT

For SDS-plus Hammer and Driller

Features

- Carbide teeth welded at high temperature.
- Threaded steel.
- ALG cone-shaped shank.

Applications

- Drill big diameters for electrical installations.
- For light hammer action drills below 700W.

CARBIDE TEETH

Features

- Carbide teeth welded at high temperature.
- Threaded steel.
- M16 shank.

Applications

- Drill big diameters for electrical installations.
- For hammer drill intermediate power for 700W to 950W.

CARBIDE TEETH

Features

- Strengthness and efficiency for sanitary heavy work and renovation.
- For all type of drill hammers with power of more than 950W.
- Cone-shaped shank.

Advices

- While using powerful percussion hammer drills, one needs to :
- avoid empty hammering (when only the centring bit is in the material, and not yet the core bit); that makes it necessary to pre-drill with the centring bit alone.
 - when the core bit is assembled; lock it on the taper of the core bit adapter.
 - always start drilling with the core bit using the centring bit positioned in the pre-drilled hole.
 - remove the centring bit as soon as it is no longer necessary (i.e. as soon as the core bit comes into play).
